

ABSTRACT OF THE DISCLOSURE

~~The present invention relates to a~~^A product information system in which necessary product information can be timely and appropriately provided and also can be easily and quickly revised in accordance with a design modification. The ~~present~~ system is a product information system 1 in which a main server 10 and a plurality of subservers 30 each of which is disposed in each set region can be mutually connected via a network 2. The main server 10 is comprised in a user information storing ~~means~~^{mechanism} for mutually linking and storing identification information assigned to a user and an address of a subserver 30 which controls the ~~said~~ user, a searching ~~means~~^{mechanism} for searching, based on identification information of a user, through data stored in the ~~said~~ user information storing ~~means~~^{mechanism} and obtaining an address of a subserver which controls the ~~said~~ user, and a sending ~~means~~^{mechanism} for sending the obtained address of the subserver to a terminal unit of the user. The subservers 30 are each comprised in a product information storing ~~means~~^{mechanism} in which product information is stored and a product information providing ~~means~~^{mechanism} for providing product information stored in the ~~said~~ product information storing ~~means~~^{mechanism} in response to a request from the ~~said~~ user terminal unit.
